

Can you feel the Sunshine

Can you feel it! The Sunshine!
You best believe it's our lifeline
Warming us with hot sun rays
Giving us our light and days
Filling us with good energy
It's our friend not our enemy
Centre of our solar system
Three rocks away for safe distance

As we orbit round the sun
Seasons go and seasons come
Caused by earth's obliquity
Of twenty three point five degrees
Plasma gases hydrogen
Fused with lots of helium
Use dark glasses in the sun
and when you're swimming
Don't forget your sun protection!

Can you feel it! The Sunshine!
Keeps me feeling so sublime
Coming up in the morning
Signalling day is dawning
Looking east for the sunrise
Always sets in the west skies
If you're lucky enough to own a sundial
You can tell the time in real style

As the earth spins day and night
Twenty four hours times it right
Astral bodies all align
Just like clockwork right on time
Ultra violet infra red
Light that passes over head
Tanning nicely? Don't turn red!
So when it's blazing
Don't forget your sun protection!
